

CHESCO Coring & Cutting has expanded its service line to feature structural scanning!

CHESCO now offers Ground Penetrating Radar (GPR) to provide real-time detections of embedded items in slabs, walls & columns:

- Reinforcement bar and post-tension cables
- Electrical conduits
- Water and sewer lines

CHESCO's GPR technologies are nondestructive and ideal for identifying buried utilities prior to breakout and removal.

Utilize CHESCO's GPR systems to receive accurate, high resolution detections and avoid costly compromises to your project!

For more information or to schedule a scan, please contact Michael Cliggett at mcliggett@chescoscans.com or 484-402-0740
